eManifest System Information Update

One big question our hazardous waste generators are asking is, how does eManifest affect me and what, if anything, should I do when it launches? Here are some key points our valued customers should keep in mind during this transition.

- **EMSI's manifest process will not change.** We will continue to prepare and print manifests for our clients. Our clients will still be required to physically sign (pen to paper) all hazardous waste manifests.
- EMSI and our partner Treatment Storage Disposal Facilities (TSDF) will continue to use paper manifests during transport and will upload data and pdf scanned copies to the EPA eManifest system.
- Hazardous waste generators will continue to receive signed and returned manifests from TSDFs after June 30. In addition generators can register at <https://rcrainfo.gov> to have access to pdf scanned copies of their hazardous waste manifests uploaded to the EPA eManifest system. RCRAInfo is the portal used by eManifest to access the system.
- Additional benefits of eManifests include live hazardous waste information already EPA's systems for electronic biennial reporting.
- Although eManifest doesn't require any special training or technology, your local Enviroexpert at EMSI is happy to answer any questions or concerns regarding the impending launch.
- Here are some helpful links to information regarding the upcoming eManifest launch.
